Comments: Other species rely on EHE standards in the BNF. According to the Gold Butterfly Biological Assessment (BA) for Grizzly Bear and Lynx pg. 11, "the Forest Plan manages wildlife security based on elk habitat effectiveness." In the Grizzly and Lynx BAs for both Gold Butterfly and Darby Lumber Lands II, the specialist states, "The EHE standard results in areas of secure habitat for a range of species including grizzly bears". (p. 10, Gold Butterfly BA; p. 9 DLL 2 BA). What will be the effects on other species that rely on the security of EHE standards? What has been the effect of over a dozen site specific amendments for other species like wolverine, fisher, lynx, grizzly and more? Please include baseline and current wildlife surveys.
