Comments: It has been already a proven fact that the use of pzp to sterilize horses works . Its simple , not anywhere near as expensive as it costs to round up horses and house them and feed them . Why wouldnt anyone use what is a simple process to keep herds at a manageable size .. use the pzp and it wont be necessary to round up more horses and keep the destructive BLM out of the picture . Roundups have already infuriated way too many people . Use the pzp and you will make some friends instead of enemies .
