Comments: I am most concern about who the Yellowjack project will benefit. The attachments provide by you will not enlarge so that is large enough so I can read it. If it is to benefit the logging industry the introduction of new roads or other infrastructure it should not be done at the expense of the taxpayers. We should not be supporting for profit industries. If it is to control invasive species that would help native wildlife this project should be approved. I have several questions. Have Native American tribes been consulted? Is this new land being opened to logging? Have local citizens had input? Have scientist and naturalist been consulted?
