Title:
Comments: Please protect the wild horses of Heber. They can provide balance to the ecosystem, horses are known to not over graze (it's true and provable) and they can provide a source of eco tourism to the area - just ask me - I have travelled to many areas of North America and the world to see and photograph wild horses.
It is Hubris in this changing world to think we can let one industry dominate how we manage public lands and how we manage our ecosystems. Please protect these iconic wild horses - one of the last true symbols of the American West
