Comments: Lowering the number of wild horses below 100 WILL result in inbreeding and genetic diseases. Restricting them to a tiny fraction of the National forest will result in a lack of access to food and water. Both of these actions will result in all the wild horses in that area dying off, which is what the Forest Service obviously wants, as they have been trying to kill off the wild horses for years now. Those horses have been in this area since the Spanish came looking for gold many hundreds of years ago. They are no more an invasive species at this point than anything else that is deemed native..

Let the wild horses roam free.
