Comments: The Heber wild horses require protection, not decimation. These animals have been around for more than 140 years, so why are they suddenly a problem? Their habitat has been devastated by wild fires, forcing them to migrate. If you move forward with a massive reduction in numbers, you will be forcing the survivors to inbreed, which will increase the number of birth defects, and ultimately dwindle the numbers down to zero. You may disregard them as a nuisance, however, many of us do NOT share that opinion.

Thank you for your consideration.
