Comments: Please don't limit the wild horse population! Horses are not rabbits. There wouldn't be enough genetic variations for future generations! Eventually the only offspring created would be so incredibly inbred and ill that they would all die early on, unable to thrive, and our future HUMAN generations will never even be able to enjoy wild horses! Please just let the wild horses live and have access to more than 20 acres of land. REGULAR horses need at least a square mile of access to land PER DAY and that is just to be healthy. Stop the killing. It's a waste of tax dollars!!!
