Comments: There is no environmental nor scientific reasoning behind this planned genocide of America's Wild Horses. No more round ups and no more indefinite holding pens (aka horse prisons) that is costing taxpayers billions of dollars and an expense to the forests, and the environment at large.

It is the practice of leasing 'grazing' permits to ranchers so their cattle can graze for pennies yet demand there is no competition from the indigenous species that have called American rangelands home for 100s of years.

Do your serious homework before presuming you -mere humans- know better how to "manage" our wildlife than Nature does. You don't. You can't.
