Comments: The Forest Service should require the contractors to do a better job protecting and restoring trails within their treatment area.

As an example, many trails within the Ophir thinning project, even the USFS Designated Routes, were ruined, obliterated and not restored properly. It made me cry last time I biked through there and I cant go back.

The Peak 7 project has the potential to impact the Peaks Trail, Siberian Loop and others. The first priority should be for loggers to avoid trails entirely. They should be required to hire a qualified trailbuilder to restore the trails they have obliterated.

Please consider the impacts to important recreational resource the Summit County community has worked hard to create.

Thank you.
