Comments: An EA/Eis must include the research and monitoring data and the scientific methods used to differentiate between wild horses versus wildlife versus livestock. This monitoring research and its subsequent report data and summary must include all information on all methods used by the USFS to determine and differentiate between wild horse usage and wildlife usage and livestock usage of forage and water usage in at least the past ten years. The water and forage usage of wild horses and domestic livestock. I require that any NEPA analysis of this proposed action include but not be limited to a thorough consideration of the following significant impacts of this action: 1) The impacts of helicopter drive trapping on the wild horses and other animals and wild life which I feel is totally inhumane way of doing it. 2) The impacts of water/feed trapping on the wild horses along with all the other wild life it would hurt. The horses were here a long time before cattle and ranchers buying the use of these areas.
