Comments: Please, I implore the US Forest Service to please leave these wild horses alone. Allow them the right to exist, support them rather than deny them this opportunity. If, as may be the case that they over graze or otherwise may be harmed by their own numbers, help them, perhaps sterilize them but do not destroy them. So much in this world and so many in this world need these majestic and gentle animals..let them live, let them have the space to roam as they were intended for centuries. Please try and remember why you, a member of the US Forest Service sought out your employment...perhaps to protect nature, to nurture the life found on this great planet in this great country? Let these intelligent, gentle beings not only live but flourish in a world that has too little of what they represent and are....beauty, wildness & freedom. Thank you. SGL
