First name: Barbara

Last name: Kiipper

Organization:

Title:

Comments: I believe that an AML below 150 is unacceptable for any herd to be genetically viable.

Proper management is using PZP, not castration or any surgery to mares or any fertility drugs which render them infertile.

These issues must be dealt with in all herds, to ensure the integrity of the 1971 WHB act. Its time to do that with regard to the preservation of the herds.

It's your job to preserve and protect!
