First name: Mary
Last name: Rivas
Organization:
Title:
Comments: Taking more of these horses will lead to extinction because of inbreeding. How many of these horses will be hurt or killed during these roundups? You say you will introduce new horses for diversity but you are still breaking up bands of wild horses, bands which form very close bonds.
Will the new horses carry on the true bloodlines of the original herd? No, nature has a way of preserving these herds which you cannot duplicate. Leave these horses alone. Listen to the American people, you are working for us not ranchers or big business.
