Comments: Herd management can be achieved with support from the community with a few edits to the current proposal.
1. What is the specific measure of overpopulation defined. Provide specifics of demonstrated herd illness, damage to the environment, etc.
2. Ensure adequate protective measure for those horses deemed dispensable. What is the age (old), injured (lame versus permanently disabled), etc.
3. A simple statement that horses will not be sold in kill auction.
Simple clarification, definition and protective measure will strengthen the proposal and more importantly demonstrate the dedication to the ultimate goal for long-term protection of the herd.
