Comments: It is hard to believe that in 2020 we are still asking for protections we have known for 50 years were critical to the protection of the planet.

I respectfully request that you protect these lands by designating all inventoried roadless areas as non-motorized. By managing the wilderness as true wilderness in order to preserve their changes for future designation, by including an objective that removes all unnecessary roads over the life of the forest, and establish standards that truly protect fish and wildlife, restoring and connecting their habitat.
