Comments: Thanks to Darren and Dean and all of the team that worked on this Flat Country Project. My comments are mostly focused on increasing elk and deer numbers between Rd. 242 and Robinson Lake Rd. Numbers of elk herds back in the 70's, 80's and 90's were much larger in the Flat Country area. The herds seem to have migrated to the west and on to private timber lands. I believe alternative 2 will turn this trend in another direction in the next 40 years.

A few more comments, the Bunchgrass Meadows project area could be expanded to the north to include some smaller open areas in the bottoms.

Maybe experiment a little by replanting some units 20ft by 20ft to let in some more sunshine in the reprod.

Hunting seasons are almost 4 months long in the project area and all should be aware of this activity and camping.
