Comments:

Please prove the BBC current population count of the Heber herd. Please prove there is an overpopulation of horses in the Heber herd.

What will happen to the Heber wild horses that are captured and removed? The SR horses are protected and should be managed humanely. If the horses are not considered excess it will be returned to the territory. Horses should not be sold without limitations- they will end up slaughtered. Horses should not be harmed or euthanized due to age or conditions such as blindness or club foot.

If a healthy animal is under 10 years old it will be offered for adoption up to 3 times. Note, even if offered on some kind of online adoption, that still counts against the horse if not adopted, so they can go through a whole lot of horses very quickly that way. If not adopted but offered for adoption at least 3 times it will be sold without limitation. (kill buyers love this) If not sold it will be destroyed and protection under the Act ends.

If the animal is adopted it enters into a 1 year care and maintenance agreement.

If the terms are met a title is issued and protection under the Act ends.

If terms are not met that animal is reclaimed and goes back through the process.
