Comments: "Require the Forest Service to provide scientific data that shows there is an overpopulation of horses in the Heber herd," states one of the talking points. "Keep in mind that if they put forth this plan, they will aim to cull way below their upper limit of 104 horses."

"Even 104 horses is well below the genetic viability of a wild horse herd. Make no mistake, this is a plan for the extinction of the Heber herd," continues the statement.

"It is reasonably foreseeable that the Draft Plan, if implemented as written, will effectively lead to the genetic inviability and extinction of this wild free-roaming herd over time," writes Kathie Reidhead of Payson. "That will be a permanent loss of a piece of our American western culture and history."
