Re: Heber Wild Horses Management Plan
Public Comment

Date: March 9, 2020

Thank you for the opportunity to submit my comment on the pending management plan of action.

The Heber wild horse herd is protected under the 1971 Wild Free Roaming Horsesn Burros Act, please honor the rule of law as written. Following are quick points of extreme citizen concern:

1. Heber herd gene tic viability
2. No scientific data

America is a nation of diverse people in community n states that 80% oppose horse slaughter. Sterilization is not a humane method of birth control and is a failure of good land management, and stewardship. Ranchers accusation of concerned citizens is just not true. Ranchers consistently shout anti-wild horse theories which are self-serving. The number grazing animals on wild lands is beyond out of control as is the number of wild animals federally slaughtered yearly for these same ranchers.

Please kindly stand up for the majority and the good for the greater good.
