Title:

Comments: I oppose the roundup of so many of the Heber horses. You should establish a genetically sustainable population of at least 200. You should use fertility control to stabilize the population. There should be no surgical sterilization. Boundaries should be redrawn to accurately reflect the horses' habitat. Protocols must be put in place for housing, care, placement and tracking of all horses removed. Public lands and wild horses belong to all Americans and they must be managed in the interest of all Americans. Management must be humane and based on science.
