Title:

Comments: Tonto National Forest is a National treasure! We need forests to produce oxygen and take up carbon dioxide. Animals, birds and fish need these areas left alone to breed and have big trucks not ruining their food sources, homes, or maiming or killing them.

Mining and heavy logging will hurt the people that rely on the animals for food.

Companies have shown that they are not responsible to responsibly make sure the land is restored to where it was before they were allowed to enter.
