Comments: I have seen similar government reports regarding the protection of Wildlife and am aware that they are generally bias toward protecting the rights of cattle ranching and Cattlemen association's. I am concerned that this process is once again favoring Cattlemen and cattle ranching. I believe our natural resources and lands are for wildlife. Included in that are the wild herds of horses that inhabit this land I do not think 450 is an excessive number of horses. However if there is a limitation it should be done in a humane way not including shooting killing trapping or harming wild horses in anyway. I also fully feel that it is time for are National lands to be void of cattle and cattle ranching. The leasing of our public lands is no longer applicable or necessary for the economic good of our country. It has been fully determined that cattle on our public lands destroy wildlife habitat including grasslands shrubbery Forestland , streams and rivers. I feel there is a connection between the ranchers and the random killing of these beautiful horses. This inhumane act must be investigated and prosecuted by the forest service.
