Comments: I am writing to comment on the Herber wild horses.

Your AML of 50 to 100 for horses would rob the herds of their diversity, lead to inbreeding and eventual extinction. On what scientific studies are you basing this assessment?

It is your job to use other means to control this herd such as artificial birth control. This does not mean surgical sterilization of any mares or stallions.

The land boundaries must be assessed to give them the land they are entitled to. What private businesses are using adjacent areas which are pushing for the removal of these horses. Americans want our wild Horses is protected and remaining on our public lands.
