Comments: All ridiculous wild horse round ups must be stopped. We have a world that is hotter than it has ever been in history, and is due to get hotter. We will be having more wild fires all over the world in the future. The very best fire suppressent out there are our wild horses. Not to mention they are better for the ecosystem than cattle due to they are NOT ruminants. Horses, with their one stomach, pass undigested seeds through in fertilizer and new plants sprout. Cattle, with their four stomachs, digest everything so thoroughly, no seeds are passed through. So all in all, we are going to need our wild horses not just as fire suppressants, but to keep ecosystems healthy. Because they wander some 20+ miles a day, they do not overgraze, as cattle are wont to.
