Title:

Comments: 1.Areas designated by the law are to include "all" areas where the wild horses were found in 1971. Including where they might migrate to and from.

We the people, need Forest Service to give us the information they used as to how and why of the Heber Wild Horse territory was implemented.

We need FS to produce ANY and ALL scientific studies and any and all assessments that were used to determine these boundries.

2. A complete Environmental assessment/analysis/ impact statement needs to be done on all wild life and domestic animals (including CATTLE) in said area. Population of the Wild Horses needs to be re-visited and proven.

3.NO ONE PERSON, could possibly have the needed knowledge to make the final decision concerning the Heber Wild Horses final fate.

To be so finite.

This certainly does not make the Forest Service final decision, at all credible, educated, complete nor un-biased at all.

These Heber Wild Horses are Federally protected by law.

Last comment:

As my young sons were growing up,

I told them.....

"Anyone can take a life,
but not one among you can give it back."
