Comments: Forest Service and the Flat county project.
When do you learn the lessons of extreme wildfires? When do you learn that taking the big trees (which are fire safe as a function of size) UNDERMINES all your so called fire protection. The conversion of multi story/species/age forests into even age plantations has eliminated beneficial surface fire and ensuring cataclysmic fire as a consequence. You have converted far too many acres now so STOP it. No more Industrial forestry on National lands as it is a bust environmentally, economically and socially. All are liabilities in the Industrial model. Stop being the hand maid to Industrial rape run forestry. Be responsible stewards for a CHANGE!!!!!
