Title:
Comments: Logging of large and old growth trees, Sanitation Harvest, logging of popular recreation sites violates the Forest Plan standards and must be prohibited. Logging will not reduce root rot and will only serve to blemish the forest and negatively impact wildlife- especially Pileated woodpeckers and Northern Flickers, black bears, elk, deer and wild horses who depend on forests for shelter and food.
The entire sale must be dropped or an Environmental Impact Statement prepared for public comment- including extensive public outreach. Logging the Walton Lake area will destroy habitat and opportunities for me and other people to enjoy its natural beauty.
