Comments: I find the Wayne Forest Plan Revision lacking in innumerable ways with regard to the latest climate change research and effects on the biodiversity of creatures living in the Wayne National Forest. I urge you to READ and consult all CURRENT peer-review science provided to you by ACFAN members. As was pointed out by a recent court ruling (March 13th) regarding WNF Fracking leases, the ruling found fault with the lack of thorough research and concerns for environmental impact. This very serious ruling also applies to this Plan Revision. Where is the evidence of a thorough NEPA review establishment? Furthermore we MUST NOT sell our forests to logging companies for a fraction of their worth . Please do your job and protect our only state National Forest and our environment!
