Comments: hi, concerning the Dover trails and Backcountry skiing area, I feel it is very important to spare as many beech trees as possible. The WRC and the town of Dover has identified this area as very significant bear habitat. collaboration between local, state and federal agencies is critical.

I hope all historic land features such as cellar holes, stone walls old stone dams, railroad beds, and even old orchards can be preserved

I hope there is a diversified plan for dealing with the log landing areas when they are no longer needed; as maintained open spaces, camping sites, re-planted with trees and other useful ideas.

I hope truck traffic and personal use of the wild ares can co-exist, both on the roads and in the woods, and noise levels can be kept low.
