Comments: I urge you to adopt the Citizens Conservation Biology Alternative - please remember that these forests are an important legacy for ALL Americans - rich with wildlife, unroaded areas, and native fish habitat.

I urge you to include the suggested specific guidelines that keep the widest boundary for riparian areas, protect old growth trees, ensure the continuation AND RECOVERY of native fish, take into account the needs of supporting the grizzly bear, and retain the increasingly rare large undeveloped areas for future generations to enjoy.

I urge you to rethink the recommended cut and consider the ever more needed role of forests (especially old growth trees and stands) as carbon sinks in the face of escalating climate crisis.

Thank you for considering these comments.
