Title:

Comments: Water is essential for all life - human life and wildlife. Our water resources, such as the ones in this area are essential and any and all negative impacts on them must be removed.

As you evaluate river segments in the Nez Perce-Clearwater NFs Forest Plan, please protect all rivers within this area and contributing to the river flows within this area.

We ask that you accomplish this by designating their protection against negative impacts by designating them under the Wild and Scenic River Act.

Please include these protections in as you prepare a final Environmental Impact Statement (FEIS) for this area.

Thank you.
