Comments: A lot of people have been working hard over the past 20 years to improve the habitat of the Gold Creek watershed. Recent public investment of the I90 Gold Creek bridge was constructed to help foster Wildlife connectivity and allow Gold Creek the room to develop a more natural hydraulic and floodplain environment. The work proposed as part of this project will significantly improve the habitat within the Gold Creek Watershed and will be a huge improvement for Bull Trout habitat, which is much needed. This work is an opportunity to show that we can significantly improve baseline conditions with some effort and resources. In addition, This type of project provides jobs while at the same time improving the environment for generations to come. I am in full support of this project, it is the right thing to do to help re-establish the function of Gold Creek.
