Comments: We need to have a >50" trail system with in our forest system locally. Such a system will help direct some of the use legal and illegal away from the other trails. It could maintained by local clubs and users.

Currently Trail #2337 and trail #2339 are designated high clearance Jeep trails or 4wd trails but in current state they are regular roads. They do not represent a class 2 trail defined by the USFS. My request is that the USFS work with local offroad groups to develop these trails into Class 2 trails with obstacles to create an excellent >50" offroad opportunity for the public to recreate on in our local forest. This would be ia beginning for a system. The need for a larger >50" trail system is significant with a large group of users in this area. To keep it in good shape we need to disperse the use to mitigate possible damage from overuse.
