Comments: Collaborative information/public comment on the forest plan revision on the Nez Perce and Clearwater National Forests

To Whom it May Concern;

The Nez Perce and Clearwater Forests are national treasures and we are so fortunate to have them in our back yard!. They are home to many rare and imperiled species. The Clearwater Basin has been identified as having the best habitat for large carnivores in the Rockies.

Knowing that the Forest Service is proposing plans that would dramatically increase logging really breaks my heart!

I am strongly encouraging the Forest Service to analyze the Citizen Alternative submitted by the Friends of the Clearwater. This plan would ensure quantitative standards and public accountability, reduce carbon emissions, and promote carbon sequestration through sustainable logging levels.

Thank you for considering my comments!

Sincerely,

Lennis Watts
