Comments: I vote for an increase of the wild horse population to the maximum. The reasoning of the supporters of #2 alternative are most assuredly those with vested interests in human activity proliferation to the detriment of the wildlife. I continue to follow the archeologists who have studied genetics and find that our wild horses are direct descendants of the same genetic wild horses of 12,00 and more years ago.

As an aside, I have been there many many times to film the wild horses. They are NOT starving. However, I see many logging trucks barreling down the Ochoco Creek Road and very high speeds without regard for the wildlife.

TAKE NOTE!!!!

STOP bowing to special interests...cattlemen, loggers, encroaching human populations to name a few. JUST PLAIN STOP IT NOW!!!!
