Title:

Comments: I would like to comment in support of the project. However, due to the location of the project and prior events in the area. I would request that every measure to prevent spills be taken, including building the pipeline according to Title 49 part 192 of the code of federal regulations "Transportation of Natural and Other Gas by Pipeline: Minimum Federal Safety Standards". Previous lines not built to those standards in the area have already shown the potential consequences of using the minimum standards for gathering lines and produced water lines. In addition I would like to see Petrox in their contractor selection process, use proven contractors that utilize workers who have gone through an industry apprenticeship and use the highest level of skilled workers and have a proven track record of environmental and safety compliance. I would be ok with which ever alternative is used as long as it follows those guide lines.
