Comments: In option 2, there is not a minimum limit of wild horses set which concerns me. I also think that based on forage, wildfires, etc. any animal is going to police itself in regards to how many can live on that particular range. I don't understand why we have to intervene in this process. The only reason is due to the amount of cattle that need to 'free-range' on BLM territory for a fee. I am against option 2. There are no guidelines or boundaries on the number of wild horses in this option. That is unacceptable. Option 1 , leave as is or Option 3, increase the number are the only two that make sense. We don't need to manage anything beyond that. The herd manage themselves based on all of the factors you stated in option 2.
