Comments: Thank you for sharing this information in a readily understandable format. I can understand the layout of the planned development.

I would appreciate knowing more about mitigation measures related to parking areas. For example, will they be permeable so as to ensure that they do not cause toxic or thermal shock after summer rains. I would also like to know of plans for managing pollution from the parking area, through the storm management ponds.

I would also like to know if the proponent has considered replacing parking areas with shuttle services from area accommodations. The Mont Tremblant resort (Quebec, Canada) area has a significant shuttle system allowing you to park your car once and ride the shuttle to the resort. All the shuttles are equipped with ski racks.
