Title:

Comments: I would like to file an objection to the April 7 draft decision and request a full Environmental Impact Statement and further consideration for the undue environmental and scientific impact of a road across the pumice plain. The Forest Service has not sufficiently demonstrated the need for the road other than metrics of cost or convenience. The actions this far have been insufficient to address the serious concerns to long-term ecological research in the area, one of the key reasons for the establishment of the monument in the first place. Both an objection resolution meeting and a full EIS are needed before further action is taken.
