Comments: Please install this water service. I have barely survived two fires in our county while firefighters risked their lives to save the town and the ski facility. I have also camped, hiked, and picnic-nicked at Camp May for years. Our area finally deserves to have the fire protection and access to potable water that most recreational facilities in our state have had for years.
Whatever environmental impacts that will be caused by this project should be accepted in order to protect the existing well used and appreciated outdoor recreational opportunities that serve the whole state.
Thank you for your time and hard work to forward this project for myself and the generations to come.
