Title:

Comments: The scope of this proposed project will be devastating. The impact on water, salmon, and low impact recreation will be irreversible. There are sufficient private lands in this region to support the timber industry. Logging these areas is unnecessary and run counter to to what we need most - clean water, reduced carbon, and the protection of natural places.

The steep slopes surrounding the North Fork will suffer from erosion due to clearcutting and road construction. Water ways will be contaminated wildlife and natural habitat will be destroyed. A forest tat took generations to grow and evolve will be decimated in a matter of a short time.

Please conduct the proper EIS process, please consider future generations and the precedent this sets for destroying other beautiful lands. Logging these areas represents a short term benefit for a few and has negative impacts for many.
