Comments: Please consider implications of logging near the North Fork Nooksack river before operations begin. In particular, it would benefit the forest, fauna and flora, as well as people of the water shed to have a comprehensive environmental review prior to work. I understand the financial benefit of the proposal, however, given the emphasis on conservation and recreation in the area, it may be possible to raise monies in other ways. The proposed logging in riparian reserves is troubling. If nothing else, possibly other sites can be considered to replace these plots.

Thanks for your consideration.
