Last name: Miller

Organization:

Title:

Comments: This proposed project is unreasonably large and appears to be ill-considered. As a hunter and outdoorsman, as well as an American citizen who values a viable natural resources economy (including logging and other value streams) over the long term, please complete a full EIS for this project before proceeding. The scale of this proposal is extreme and comes with many negative impacts. The FS should not build more roads in this sensitive area as they accelerate erosion and introduce invasive species. This controversial and damaging project should not be fast-tracked.
