Comments: This logging project must not move forward. This section of forest is vital to our efforts to negate climate change made worse by projects just like this one. We need this stretch of forest to mature, to maintain the precious biodiversity that these lands need, and to continue to recycle air polluted by the continued use of fossil fuels. Logging in this area would be absolutely detrimental to the future of these National Forests. To pretend that the impacts of this project would not be disastrous and far-reaching is both ignorant and dangerous. Please, for the sake of our future, listen to science, listen to fact, and do not let this project move forward.
