Comments: This logging proposal is on a scale not seen for a century and we all know how important our forests are for the environment, sustainability and personal safety. We all remember Oso- we cannot support a clear-cutting or heavy deforestation! This proposal needs to be evaluated by EIS to really investigate the community and environmental effect this could have.

On a personal level, I'm a huge nature lover and outdoor adventurer, like many other Washingtonians and I think we need to take a stand to support our lands for the health of the environment and future generations to enjoy the grand natural beauty of our state.

Please deeply consider the impact this will have and thoroughly investigate the consequences!
