Comments: To The US Forest Service:

Clear cutting the Mt. Baker Snoqualmie National Forest will have lasting negative effects , as you likely know, being a forest service professional. The clear cutting would ruin the positive effect the Forest has on climate change. It would destroy nearby ecosystems that depend on those trees, and the roads into it would cause more destruction. Please consider the fact that the National Forest is meant to be preserved for all of us. An EIS is required to see how this would change our Forest and the human communities that depend on it, and I do believe it would expose what a bad idea it is to log our National Forest.
