Comments: I am extremely concerned about this proposal and the impact it will have on the ecosystem in this area, climate change, recreation. Downstream communities may also be impacted by increased flooding, forest fires and other detrimental effects of this project. There are more careful ways to harvest these forests without causing this kind of destruction. These forests cannot be easily replaced. To allow wholesale logging at this massive scale goes against the careful stewardship that has been in place. Please reconsider this project. It will be disastrous!
