Title:

Comments: This aberration absolutely requires an EIS. Period. In the face of climate change, a phenomenon unrecognized by our president but fully established in science, a poorly envisioned clear cut plan that will include permanent logging roads regardless of the assurances, and a host of other impulse-driven notions it is vital that this enterprise be exposed to the light of day and a full assessment. I live on this river. There is NO need for this brazen, reckless clear cut and "thinning" to proceed. Shame on the USFS for considering something so ill conceived.
