Title:

Comments: N ! This is our environment, our home. We live here. These trees provide for a stable weather pattern and climate we can count on. It has been destabilized enough from logging practices. I've seen the destruction during my 69 years here. NO! Deforesting and all it takes to get to that point destroys our lands, changes all of that serve our abundant natural species, as well as our wild life habitats, let alone clean water preserves, and the clean air and beauty and quiet of the land.

We've seen just the truth of just what this activity does and that was on a lesser scale that is being proposed now. We have not protected and nurtured these natural resources for some profit hungry, money grubbers to come in and rape, pilage, plunder, and forever change our environment ~ our Mother Earth.
