Comments: I am concerned that this logging project is a huge departure from previous forest service logging projects. It's impacts on local communities and and EIS must first be completed with sufficient public announcements and time for comments.

Deforestation contributes to soil erosion and sediment flowing into rivers and the ocean. Forest sequester carbon.

Keep out forests a priority. We are very lucky in the NW to have clean water, wildlife, and recreation that brings people in close contact with the life giving beauty of nature. deforestation takes that away.

Roadless areas are few. This part of the forest in WASHINGTON has little travel by vehicles and allows for animals to have safe and protected homes. more roads would decrease wildlife activity and disrupt the natural balance needed to provide ecosystemic harmony.

Please use due diligence in moving forward.
